力 だめし print part4 Elementary school 6th grade mathematic 1 【6】 (1)

How much does 1 kilogram weigh?

By the way, we learned that there is a relationship between the amount and the weight of water in mathematic.

1 liter is 1 kilogram. Is there anything that is 1 liter around us?

Look, milk carton is 1 liter. Let's compare with this.

Then, let's start with a small thing.

1 yen coin is very light.

1 yen coin is about 1 gram.

It's a trick question of 1g and 1kg. This isn't correct.

Next, handkerchief, it seems to be heavier than 1 yen.

But it's lighter than milk carton.

The next largest item is the school bag.

I think this is the closest.

It's about the same weight.

But let's compare the vaulting box.

Wow, it's too heavy. It's impossible for one person.

Then, the answer seems to be one.

It is important to have an image of the weight and size of things as usual.

Now, let's find a 1kg item in our house.

Everyone, let's try.
