How big is the area of about 150 cm²?

This is probably about the same if we use a 15 cm ruler.

Should we measure the area of the floor of No. 4? In the first place, we can't measure it with such a ruler.

The area of the stamp of No.1 is 3 cm, so it is quite small.

The area of the textbook of No.3 is more than 15cm in length and the width is also over 15 cm, so it is quite large.

The area of the New Year's postcards of No.2 is about almost 15 cm in length and the width is about 10 cm. It is perfect.

The answer is No.2.

When thinking about such a question of area, it is good way to consider it with put it back into a rectangle or a square.

Moreover, if you pay attention to the unit, you may find out the answer.
